History

- $\tau\epsilon\chi$ (TeX) was developed between 1977 and 1986 by Donald E. Knuth.
- LaTeX is an interface with helpful macros for the TeX system. It was written by Leslie Lamport (= **Lamport TeX**).
- Pronunciation: [ˈlaɪ.tɛç], [ˈleɪ.tɛç], [ˈleɪ.tɛkh]
- LaTeX works with markup tagging conventions – similar to HTML – to
 - define the structure of the document (e.g. chapters and sections),
 - for typographic marking (e.g. bold and italics),
 - for cross-references (e.g. citations)

WYSIWYG vs. WYGIWYN

- MS Word or Libre Office: **WYSIWYG** (*what-you-see-is-what-you-get*)

This is a headline

This word is **bold** and this one is in *italics*.

- L^AT_EX: **WYGIWYN** or **WYGIWYM** (*what-you-get-is-what-you-need/mean*)

▼ \section{This is a headline}

This word is \textbf{bold} and this one is in \textit{italics}.

Document structure 1

A L^AT_EX document consists of (at least) two parts: **preamble** and **body**.

L^AT_EX preamble

part of the document where **global characteristics** of the document are specified.

L^AT_EX body

part of the document where **local characteristics** of the document are specified and where you write your document.

Exercise

- Insert the following lines in your `.tex` file and compile.

```
%%%%%%%%%%PACKAGES%%%%%%%%%
% Compile: XeLaTeX BibTeX XeLaTeX XeLaTeX
%%%%%%%%%
\documentclass{scrartcl}

%%%%%%%%%COMMANDS%%%%%%%%%

%%%%%%%%%META DATA%%%%%%%%%

%%%%%%%%%END PREAMBLE%%%%%%%%%

%%%%%%%%%BEGIN DOCUMENT%%%%%%%%%

\begin{document}

This is my first \LaTeX file.

\end{document}

%%%%%%%%%END DOCUMENT%%%%%%%%%
```

- Write something after the `\end{document}` command and compile again.

Document class

Global parameters of the layout can be specified in the `documentclass` command.
The most commonly used classes are:

- `book` for books
- `article` for articles, without chapters, only with sections
- `beamer` for presentations, without chapters, only with sections

Document class

Global parameters of the layout can be specified in the `documentclass` command. The most commonly used classes are:

- `book` for books
- `article` for articles, without chapters, only with sections
- `beamer` for presentations, without chapters, only with sections

Variations of these classes (not in American formats) are provided by the KOMA-Script:

- `scrbook` for books
- `scrreprt` for long scripts with different chapters
- `scrartcl` for articles, without chapters, only with sections
- `scrlettr2` for letters

You can specify **options** in your `documentclass` command.

- **Font size** as default: 10pt, 11pt, 12pt
Default → 10pt
- **Paper format**: letterpaper, a4paper
Default → letterpaper

Specification of paper format in KOMA-Script classes: `paper=a4`, `paper=letter`

Exercise

- Specify the following options for your document `.tex` file and compile.

```

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% Compile: XeLaTeX BibTeX XeLaTeX XeLaTeX
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
\documentclass[10pt, paper=a4, abstracton]{scrartcl}

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%PACKAGES%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%COMMANDS%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%META DATA%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%END PREAMBLE%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%BEGIN DOCUMENT%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

\begin{document}

This is my first \LaTeX\ file.

\end{document}

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%END DOCUMENT%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

```

- 1 What is L^AT_EX?

Commands

In L^AT_EX, there are normally **3 types of commands**:

- **declarations:** backslash + command name

The scope of the command can be defined by an environment or with curly brackets.

```
\declaration ...  
{\declaration ...} outside of scope
```

```
{\Huge Hello world!} outside of scope
```

Commands

In L^AT_EX, there are normally **3 types of commands**:

- **declarations:** backslash + command name

The scope of the command can be defined by an environment or with curly brackets.

```
\declaration ...  
{\declaration ...} outside of scope
```

```
{\Huge Hello world!} outside of scope
```

- **simple commands:** backslash + command name + optional arguments (square brackets) + obligatory arguments (curly brackets)

```
\name[optional]{obligatory}
```

```
\textit{Text in italics}
```

Commands

In L^AT_EX, there are normally **3 types of commands**:

- **declarations:** backslash + command name

The scope of the command can be defined by an environment or with curly brackets.

```
\declaration ...
{\declaration ...} outside of scope
```

```
{\Huge Hello world!} outside of scope
```

- **simple commands:** backslash + command name + optional arguments (square brackets) + obligatory arguments (curly brackets)

```
\name[optional]{obligatory}
```

```
\textit{Text in italics}
```

- **environments:** begin + end command.

Command applies between begin and end.

```
\begin{environment}[optional]
...
\end{environment}
```

```
\begin{center}
Hello world!
\end{center}
```

Meta data

Specifying the **meta data** of your document **in the preamble**:

```
\author{first name last name \and first name last name}  
\title{my title}  
\subtitle{my subtitle}  
\date{14th Februar 2019}
```

- Other options for date: `\date{\today}`, `\date{}`
Default → `\date{\today}`

Use the command `\maketitle` after `\begin{document}` to include this information in your output.

Exercise

Specify the meta data of your document with two authors, use the `\maketitle` command, and try different commands for date.

```
\documentclass[10pt, paper=a4, abstracton]{scrartcl}

%%%%%%%%%%%%%%%%%%%%%%%%PACKAGES%%%%%%%%%%%%%%%%%%%%%%%%

%%%%%%%%%%%%%%%%%%%%%%%%COMMANDS%%%%%%%%%%%%%%%%%%%%%%%%

%%%%%%%%%%%%%%%%%%%%%%%%META DATA%%%%%%%%%%%%%%%%%%%%%%%%
\author{Sebastian Nordhoff \and Antonio Machicao y Priemer}
\title{\LaTeX\ for Linguists}
\subtitle{My first \TeX\ document}
\date{\today}

%%%%%%%%%%%%%%%%%%%%%%%%END PREAMBLE%%%%%%%%%%%%%%%%%%%%%%%%

%%%%%%%%%%%%%%%%%%%%%%%%BEGIN DOCUMENT%%%%%%%%%%%%%%%%%%%%%%%%

\begin{document}

\maketitle
```

Headlines and paragraphs

Commands for the structure of your text:

- `\part{title}` (only in book/scrbook and report/scrreprt)
- `\chapter{title}` (only in book/scrbook and report/scrreprt)
- `\section{title}`
- `\subsection{title}`
- `\subsubsection{title}`
- `\paragraph{title}`
- `\subparagraph{title}`

Headlines and paragraphs

Commands for the structure of your text:

- `\part{title}` (only in book/scrbook and report/scrreprt)
- `\chapter{title}` (only in book/scrbook and report/scrreprt)
- `\section{title}`
- `\subsection{title}`
- `\subsubsection{title}`
- `\paragraph{title}`
- `\subparagraph{title}`

These commands can be used with an option, e.g.

`\section[short title]{long title}`

The text in the **option** – when used – appears in the **table of contents** and in the **headers**, otherwise only the text in the **argument** is used.

- new **paragraph**: twice `<ENTER>` (↵) key
- **line** break: `\newline` or `\\` cause a line break without ending the paragraph.
- new **page**: `\newpage` or `\clearpage`
- `\noindent` **prevents** the **indentation** after a line break.

Table of contents

To **generate a table of contents** just include the following command in the body of your document at the position where you want the toc to appear.

L^AT_EX generates your toc taking the **information from your structuring commands** (e.g. `\section[short title]{title}`).

```
\tableofcontents
```

```
%%%%%%%%%%%%BEGIN DOCUMENT%%%%%%%%%
```

```
\begin{document}
```

```
\maketitle
```

```
\tableofcontents
```

```
\section[Introduction]{A short introduction}
```

This is an sample text. The only purpose of this text is to show how to work with `\LaTeX`. It is not necessary that this text has any meaning. It should only show some properties of the system we are using.

```
\subsection{A note on the data}
```

This is an sample text. The only purpose of this text is to show how to work with `\LaTeX`. It is not necessary that this text has any meaning. It should only show some properties of the system we are using.

```
\end{document}
```

```
%%%%%%%%%%%%END DOCUMENT%%%%%%%%%
```

Footnotes

To generate a footnote use the following command at the position where the **footnote index** should appear.

```
\footnote{content of the footnote}
```

Example

```
This is an sample text. The only purpose of this text\footnote{A text  
(literary theory) is any object that can be read.} is to show how  
to work with footnotes in \LaTeX .\footnote{\LaTeX\ is a document preparation  
system.}
```

Exercise

Download the PDF [myDocument-EX1.pdf](#) and replicate it with the commands you have already learnt.

- 1 What is L^AT_EX?
- 2 Document structure 1
- 3 Document class
- 4 Commands
- 5 Document structure 2
- 6 Characters & spaces**
- 7 Commenting out
- 8 Text formatting
- 9 Text environments
- 10 Installing packages

Characters & spaces

- The following characters can be used without problems:

a...z A...Z 0...9

. , : ; ? ! ' ' " () + - * =

Characters & spaces

- The following characters can be used without problems:

```
a...z A...Z 0...9
. , : ; ? ! ' ' " ( ) + - * =
```

- With XeL^AT_EX, you can write **accents** and **umlauts** without further commands. Another option is to use **commands** for that:

```
\ "A \ "O \ "a \ "o \ 'a \ 'o \ ss{} \ ~u \ ~n
```

```
\ "{A} { \ "O } { \ ss }
```

(1) Ä Ö ä ö á ò ß û ñ
 Ä Ö ß

Characters & spaces

- The following characters can be used without problems:

```
a...z A...Z 0...9
. , : ; ? ! ' ' " ( ) + - * =
```

- With XeL^AT_EX, you can write **accents** and **umlauts** without further commands. Another option is to use **commands** for that:

```
\ "A \ "O \ "a \ "o \ 'a \ 'o \ ss{} \ ~u \ ~n
\ "{A} \ {"O} \ {ss}
\ "{A} \ {"O} \ {ss}
```

(1) Ä Ö ä ö á ò ß û ñ
 Ä Ö ß

- The following characters have a **special meaning** in T_EX.
 You must **escape** their function to use them. (It depends on your compiler
 e.g. XeL^AT_EX vs. PDFL^AT_EX)

```
# $ & _ { } \ < > | ~ ^ [ ] %
```

- escaping with **backslash**

```
\# \$ \% \_ \{ \} \%
```

(2) # \$ & _ { } %

`\# \ $ \& _ \{ \} \%`

(2) # \$ & _ { } %

```
\textbackslash \textasciitilde \textasciicircum
\textgreater $>$ \textless $<$ \textbar $\textverto$ $|
```

(3) $\backslash \sim \wedge > > < < || ||$

- escaping with **backslash**

```
\# \$ \% \_ \{ \} \%
```

(2) # \$ & _ { } %

- escaping with **macros** or **math mode**

```
\textbackslash \textasciitilde \textasciicircum  
\textgreater $>$ \textless $<$ \textbar $\textbar$ $|$\textbar$
```

(3) \ ~ ^ > > < < | | |

- **Angled brackets** < > can be used in XeL^AT_EX without further commands.
- **Square brackets** [] can be used in plain text, but they can mark also the **option** of a command (e.g. in `\section[short title]{title}`).

In this case use `\[\]`

More on special characters:

https://en.wikibooks.org/wiki/LaTeX/Special_Characters

Space & line break

special treatment of **spaces** and **line breaks** to avoid typographic errors

- **no difference** between a **blank** and a **tab**
- **Consecutive blanks** are treated as only one blank.
- A **blank** at the **beginning of a line** is ignored.
- One **line break** (1x `<ENTER>`) is interpreted as a blank.
- One **empty line** (2x `<ENTER>`) is interpreted as the end of a paragraph.
- **More than one empty line** is interpreted as one empty line.

Example

This is a sample text with too many spaces. Here, I use one line break.

This is a sample text. Now, I use one blank line.

This is a sample text. Now, I use 3 blank lines.

This is a sample text.

Example

This is a sample text with too many spaces. Here, I use one line break.

This is a sample text. Now, I use one blank line.

This is a sample text. Now, I use 3 blank lines.

This is a sample text.

This is a sample text with too many spaces. Here, I use one line break. This is a sample text. Now, I use one blank line.

This is a sample text. Now, I use 3 blank lines.

This is a sample text.

7 Commenting out

8 Text formatting

9 Text environments

10 Installing packages

Commenting out

In LaTeX, text following the character **%** in a line will be **ignored**.

- **hiding code/text**, without deleting it;
- **finding errors** in sections;
- **avoiding blanks** and **empty lines** in a long input line;
- **writing comments** without seeing it in the output.

```
This is a sample text. %This are just notes
%Here is a special characters and a command: & \small
```

```
A comment can divide a word:
Rindfleischetikettierungs% 5 morphemes
überwachungsaufgaben% 6 morphemes
übertragungsgesetz.
```

This is a sample text.

A comment can divide a word: Rindfleischetikettierungsüberwachungsaufgaben-
übertragungsgesetz.

emphasized
test upright test
typewriter
SMALL CAPS
ex^{up}
ex_{down}

Some of these commands can be also used as **declarations**.

```
{\tiny tiny}  
{\scriptsize scsize}  
{\footnotesize fnsiz}  
{\small small}  
{\normalsize normal}  
{\large large}  
{\Large Large}  
{\LARGE LARGE}  
{\huge huge}  
{\Huge Huge}
```

tiny
scsize
fnsiz
small
normal
large
Large
LARGE
huge
Huge

The commands for font size can be used as **declarations** or as **environments**.

Exercise

Download the PDF [myDocument-EX2.pdf](#) and replicate it with the commands you have already learnt.

- 1 What is L^AT_EX?
- 2 Document structure 1
- 3 Document class
- 4 Commands
- 5 Document structure 2
- 6 Characters & spaces
- 7 Commenting out
- 8 Text formatting
- 9 Text environments**
- 10 Installing packages

Text environments

You will normally need the following environments:

- quotations,
- lists,
- abstracts,
- ...

Quotations

- In L^AT_EX there are two environments for quotations `quote` and `quotation`.
- Both show a different output dependent on the document class (e.g. `beamer` vs. `article`).

```
This is a sentence before the \texttt{quote} environment.
```

```
\begin{quote}
```

```
Furthermore, each actual ‘‘language’’ will incorporate a periphery of borrowings,  
historical residues, inventions, and so on, which we can hardly expect to -- and  
indeed would not want to -- incorporate within a principled theory of UG. [\dots]
```

```
Viewed against the reality of what a particular person may have inside  
his head, core grammar is an idealization.
```

```
\hfill (Chomsky,~1981:~8)
```

```
\end{quote}
```

```
This is a sentence after the \texttt{quote} environment.
```

List environments

L^AT_EX has 3 pre-defined and 1 general list environments:

- `itemize`,
- `enumerate`,
- `description`,
- `list`.

Every environment begins with the `\begin{ }` and ends with the `\end{ }` command.
Each point in the list begins with `\item`.

```
\begin{itemize}
\item syntax
\item semantics

\begin{itemize}
\item lexical semantics
\item propositional semantics
\end{itemize}

\item morphology
\end{itemize}
```

- syntax
- semantics
 - lexical semantics
 - propositional semantics
- morphology

The description list can be used for terms with their definitions.

```
\begin{description}
\item[Morpheme:] smallest grammatical unit in a language bearing a meaning

\begin{description}
\item[Allomorph:] phonetic variant of a morpheme
\end{description}

\item[Phoneme:] systematic unit of sound (or gesture in the case of sign
languages, see chereme) that distinguish one word from another in a particular
language
\end{description}
```

Morpheme: smallest grammatical unit in a language bearing a meaning

Allomorph: phonetic variant of a morpheme

Phoneme: systematic unit of sound (or gesture in the case of sign languages, see chereme) that distinguish one word from another in a particular language

Combining lists

Lists can be **combined** and **embedded** in other list types.

```
\begin{description}
\item[Morpheme:] smallest grammatical
unit in a language bearing a meaning

\begin{itemize}
\item minimal unit in morphology
\item subtypes:

\begin{enumerate}
\item roots
\item prefixes
\item suffixes
\item \dots
\end{enumerate}
\end{itemize}
\end{description}
```

Morpheme: smallest grammatical
unit in a language
bearing a meaning

- minimal unit in morphology
- subtypes:
 - ① roots
 - ② prefixes
 - ③ suffixes
 - ④ ...

Customizing lists

Bullet points can be customized with an **optional parameter**.

```
\begin{itemize}
\item standard symbol
\item[+] customized
\item[$+$] customized
\item[$\checkmark$] customized
\end{itemize}
```

- standard symbol
- + customized
- + customized
- ✓ customized

```
\begin{enumerate}
\item standard symbol
\item[-] customized
\item[$-$] customized
\item[--] customized
\item standard symbol
\end{enumerate}
```

- ① standard symbol
 - customized
 - customized
 - customized
- ② standard symbol

Abstract

For automatic abstracts, use the option `abstracton` in the `\documentclass` command.

```
\begin{abstract}
```

An abstract is a brief summary of a research article, thesis, or any in-depth analysis of a particular subject and is often used to help the reader quickly ascertain the paper's purpose.\par

When used, an abstract always appears at the beginning of a manuscript, acting as the point-of-entry for any given academic paper.

```
\end{abstract}
```

Abstract

An abstract is a brief summary of a research article, thesis, or any in-depth analysis of a particular subject and is often used to help the reader quickly ascertain the paper's purpose.

When used, an abstract always appears at the beginning of a manuscript, acting as the point-of-entry for any given academic paper.

Exercise

Download the PDF [myDocument-EX3.pdf](#) and replicate it with the commands you have already learnt.

- 1 What is L^AT_EX?
- 2 Document structure 1
- 3 Document class
- 4 Commands
- 5 Document structure 2
- 6 Characters & spaces
- 7 Commenting out
- 8 Text formatting
- 9 Text environments
- 10 Installing packages**

Installing Packages

- The functions L^AT_EX offers are restricted. Most **extra features** you will need are in **packages** that you can install in your T_EX document.
- Packages must be installed in the **preamble** of your document.

```
\usepackage[parameter1, parameter2]{package name}
```

Installing Packages

- The functions L^AT_EX offers are restricted. Most **extra features** you will need are in **packages** that you can install in your T_EX document.
- Packages must be installed in the **preamble** of your document.

```
\usepackage[parameter1, parameter2]{package name}
```

- Normally, (many) L^AT_EX packages are **pre-installed** in your T_EX distribution (e.g. MiKTeX).
- (Almost) every other package with manual can be **downloaded** from CTAN – The Comprehensive T_EX Archive Network (www.ctan.org)
- With the command `\usepackage` your T_EX distribution usually **downloads automatically** the package – if necessary.

This packages can be useful:

- Language package: `babel` `\usepackage[ngerman, english]{babel}`
- Font: `libertine` `\usepackage{libertine}`
- Blind text: `blindtext` `\usepackage{blindtext}`

Sometimes the **order** in that packages have been installed can affect the compilation.

Also, not all packages are **compatible** with each other or with your compiler (XeT_EX vs. PDFL^AT_EX).

Exercise

Download the PDF [myDocument-EX4.pdf](#) and replicate it with the commands you have already learnt. Follow the instructions in the last section and install the packages.
