# History

- $\tau\epsilon\chi$  (TeX) was developed between 1977 and 1986 by Donald E. Knuth.
- LaTeX is an interface with helpful macros for the TeX system. It was written by Leslie Lamport (= **Lamport TeX**).
- Pronunciation: ['laɪ.tɛʃ], ['leɪ.tɛʃ], ['leɪ.tɛkh]
- LaTeX works with markup tagging conventions – similar to HTML – to
  - define the structure of the document (e.g. chapters and sections),
  - for typographic marking (e.g. bold and italics),
  - for cross-references (e.g. citations)

# WYSIWYG vs. WYGIWYN

- MS Word or Libre Office: **WYSIWYG** (*what-you-see-is-what-you-get*)

This is a headline

This word is **bold** and this one is in *italics*.

- L<sup>A</sup>T<sub>E</sub>X: **WYGIWYN** or **WYGIWYM** (*what-you-get-is-what-you-need/mean*)

▼ `\section{This is a headline}`

This word is `\textbf{bold}` and this one is in `\textit{italics}`.

# How does LaTeX work?

By compiling your document, LaTeX creates further **auxiliary files** to improve the next compilations.

- your document: `.tex`
- your output: `.pdf`

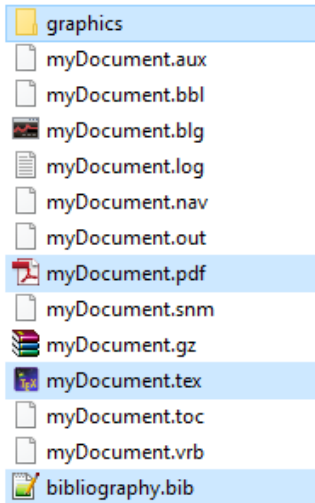

The auxiliary files can be **deleted** after your work is done. They will be created again when you compile.

- .log → information about the compiling process
- .bbl → information for the bibliography
- .nav → information for the navigation through slides
- .toc → information for the table of contents
- ...

The following files are important and **should not be deleted**. They are not created in the compiling process:

- `.tex` → this is the document you are working on.
- `.pdf` → you can delete your PDF, but this is what you normally want as your result
- `.bib` → this file contains your bibliography data base (if you have one)
- folder `graphics` → here could be your graphics (if you need some)

1 What is LaTeX?

2 Document structure 1

3 Document class

10 Installing packages

# Document structure 1

A L<sup>A</sup>T<sub>E</sub>X document consists of (at least) two parts: **preamble** and **body**.

## L<sup>A</sup>T<sub>E</sub>X preamble

part of the document where **global characteristics** of the document are specified.

# Document structure 1

A L<sup>A</sup>T<sub>E</sub>X document consists of (at least) two parts: **preamble** and **body**.

## L<sup>A</sup>T<sub>E</sub>X preamble

part of the document where **global characteristics** of the document are specified.

- The preamble **begins** (**obligatorily**) with the `\documentclass{}` command.
- In the preamble you will install **packages** for further L<sup>A</sup>T<sub>E</sub>X functions.
- **Optional** (either in the preamble or in the body – preferably in the preamble)
  - your **own commands** and
  - **metadata**
- The preamble **ends** with the command `\begin{document}`.

## L<sup>A</sup>T<sub>E</sub>X body

part of the document where **local characteristics** of the document are specified and where you write your document.

## L<sup>A</sup>T<sub>E</sub>X body

part of the document where **local characteristics** of the document are specified and where you write your document.

- The body **begins** with the `\begin{document}` command (end of preamble).
- The body **ends** with `\end{document}`.

## L<sup>A</sup>T<sub>E</sub>X body

part of the document where **local characteristics** of the document are specified and where you write your document.

- The body **begins** with the `\begin{document}` command (end of preamble).
- The body **ends** with `\end{document}`.
- Everything following the command `\end{document}` will not be interpreted by L<sup>A</sup>T<sub>E</sub>X.

## Exercise

- Insert the following lines in your `.tex` file and compile.

```
%%%%%%%%%%
% Compile: XeLaTeX BibTeX XeLaTeX XeLaTeX
%%%%%%%%%
\documentclass{scrartcl}

%%%%%%%%%PACKAGES%%%%%%%%%
%%%%%%%%%COMMANDS%%%%%%%%%
%%%%%%%%%META DATA%%%%%%%%%
%%%%%%%%%END PREAMBLE%%%%%%%%%
%%%%%%%%%BEGIN DOCUMENT%%%%%%%%%

\begin{document}

This is my first \LaTeX file.

\end{document}

%%%%%%%%%END DOCUMENT%%%%%%%%%
```

- Write something after the `\end{document}` command and compile again.

# Document class

Global parameters of the layout can be specified in the `documentclass` command. The most commonly used classes are:

- `book` for books
- `report` for long scripts with different chapters
- `article` for articles, without chapters, only with sections
- `letter` for letters

# Document class

Global parameters of the layout can be specified in the `documentclass` command. The most commonly used classes are:

- `book` for books
- `report` for long scripts with different chapters
- `article` for articles, without chapters, only with sections
- `letter` for letters

Variations of these classes (not in American formats) are provided by the KOMA-Script:

- `scrbook` for books
- `scrreprt` for long scripts with different chapters
- `scrartcl` for articles, without chapters, only with sections
- `scrlettr2` for letters

Cf. Kohm and Morawski (2014) and <https://www.komascript.de/>

You can specify **options** in your `documentclass` command.

- **Font size** as default: 10pt, 11pt, 12pt  
Default → 10pt
- **Paper format**: letterpaper, a4paper  
Default → letterpaper

Specification of paper format in KOMA-Script classes: `paper=a4`, `paper=letter`

# Exercise

- Specify the following options for your document `.tex` file and compile.

```

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% Compile: XeLaTeX BibTeX XeLaTeX XeLaTeX
%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
\documentclass[10pt, paper=a4, abstracton]{scrartcl}

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% PACKAGES%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% COMMANDS%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% META DATA%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% END PREAMBLE%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%
% BEGIN DOCUMENT%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

\begin{document}

This is my first \LaTeX\ file.

\end{document}

%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%%

```

- 1 What is L<sup>A</sup>T<sub>E</sub>X?
- 2 Document structure 1

# Commands

## Syntax of commands:

- backslash
  - + command name
  - + optional arguments in square brackets
  - + obligatory arguments in curly brackets

```
\name[optional argument]{obligatory argument}
```

```
\name[opt1, opt2=value]{obl1}{obl2}
```

```
\textbf{bold}
```

```
\documentclass[10pt, paper=a4]{scrartcl}
```

In L<sup>A</sup>T<sub>E</sub>X, there are normally **3 types of commands**:

- **simple commands**: backslash + command name + optional arguments (square brackets) + obligatory arguments (curly brackets)

```
\name[optional]{obligatory}
```

```
\textit{Text in italics}
```

In LaTeX, there are normally **3 types of commands**:

- **simple commands:** backslash + command name + optional arguments (square brackets) + obligatory arguments (curly brackets)

```
\name[optional]{obligatory}
```

```
\textit{Text in italics}
```

- **environments:** begin + end command.

Command applies between begin and end.

```
\begin{environment}[optional]
...
\end{environment}
```

```
\begin{center}
Hello world!
\end{center}
```

In L<sup>A</sup>T<sub>E</sub>X, there are normally **3 types of commands**:

- **simple commands:** backslash + command name + optional arguments (square brackets) + obligatory arguments (curly brackets)

```
\name[optional]{obligatory}
```

```
\textit{Text in italics}
```

- **environments:** begin + end command.  
Command applies between begin and end.

```
\begin{environment}[optional]
...
\end{environment}
```

```
\begin{center}
Hello world!
\end{center}
```

- **declarations:** backslash + command name  
The scope of the command can be defined by an environment or with curly brackets.

```
\declaration ...
{\declaration ...} outside of scope
```

```
{\Huge Hello world!} outside of scope
```

# Meta data

Specifying the meta data of your document in the preamble:

```
\author{first name last name \and first name last name}  
\title{my title}  
\subtitle{my subtitle}  
\date{14th Februar 2019}
```

- Other options for date: `\date{\today}`, `\date{}`  
Default → `\date{\today}`

Use the command `\maketitle` after `\begin{document}` to include this information in your output.

# Exercise

Specify the meta data of your document with two authors, use the `\maketitle` command, and try different commands for date.

```
\documentclass[10pt, paper=a4, abstracton]{scrartcl}

%%%%%%%%%%%%%PACKAGES%%%%%%%%%%%%%

%%%%%%%%%%%%%COMMANDS%%%%%%%%%%%%%

%%%%%%%%%%%%%META DATA%%%%%%%%%%%%%
\author{Sebastian Nordhoff \and Antonio Machicao y Priemer}
\title{\LaTeX\ for Linguists}
\subtitle{My first \TeX\ document}
\date{\today}

%%%%%%%%%%%%%END PREAMBLE%%%%%%%%%%%%%

%%%%%%%%%%%%%BEGIN DOCUMENT%%%%%%%%%%%%%

\begin{document}

\maketitle
```

# Headlines and paragraphs

Commands for the structure of your text:

- `\part[short title]{title}` (only in book/scrbook and report/scrreprt)
- `\chapter[short title]{title}` (only in book/scrbook and report/scrreprt)
- `\section[short title]{title}`
- `\subsection[short title]{title}`
- `\subsubsection[short title]{title}`
- `\paragraph[short title]{title}`
- `\subparagraph[short title]{title}`

`[short title]` for **table of contents** and **header**

`{title}` for the title **in your text**

- new paragraph:
  - `\par` ends a paragraph (and begins a new one)
  - twice `<ENTER>` (`↵`) key
- line break
  - `\newline` or `\\` cause a line break without ending the paragraph
- `\noindent` prevents the indentation after a line break

# Table of contents

To **generate a table of contents** just include the following command in the body of your document at the position where you want the toc to appear.

L<sup>A</sup>T<sub>E</sub>X generates your toc taking the **information from your structuring commands** (e.g. `\section[short title]{title}`).

```
\tableofcontents
```

```
%%%%%%%%%%%%BEGIN DOCUMENT%%%%%%%%%
```

```
\begin{document}
```

```
\maketitle
```

```
\tableofcontents
```

```
\section[Introduction]{A short introduction}
```

This is an sample text. The only purpose of this text is to show how to work with `\LaTeX`. It is not necessary that this text has any meaning. It should only show some properties of the system we are using.

```
\subsection{A note on the data}
```

This is an sample text. The only purpose of this text is to show how to work with `\LaTeX`. It is not necessary that this text has any meaning. It should only show some properties of the system we are using.

```
\end{document}
```

```
%%%%%%%%%%%%END DOCUMENT%%%%%%%%%
```

# Footnotes

To generate a footnote use the following command at the position where the **footnote index** should appear.

```
\footnote{content of the footnote}
```

## Example 1

```
This is an sample text. The only purpose of this text\footnote{A text  
(literary theory) is any object that can be read.} is to show how  
to work with footnotes in \LaTeX .\footnote{\LaTeX\ is a document preparation  
system.}
```

# Footnotes

To generate a footnote use the following command at the position where the **footnote index** should appear.

```
\footnote{content of the footnote}
```

## Example 1

```
This is an sample text. The only purpose of this text\footnote{A text  
(literary theory) is any object that can be read.} is to show how  
to work with footnotes in \LaTeX .\footnote{\LaTeX\ is a document preparation  
system.}
```

## Example 2

```
This is an sample text. The only purpose of this text%  
%  
\footnote{A text (literary theory) is any object that can be read.} %  
%  
is to show how to work with footnotes in \LaTeX .%  
%  
\footnote{\LaTeX\ is a document preparation system.}%  
%
```

# Exercise

Download the PDF [myDocument-EX1.pdf](#) and replicate it with the commands you have already learnt.

- 1 What is L<sup>A</sup>T<sub>E</sub>X?
- 2 Document structure 1
- 3 Document class
- 4 Commands
- 5 Document structure 2
- 6 Characters & spaces**
- 7 Commenting out
- 8 Text formatting
- 9 Text environments
- 10 Installing packages

# Characters & spaces

- The following characters can be used without problems:

a...z A...Z 0...9

. , : ; ? ! ' ' " ( ) [ ] + - \* =

# Characters & spaces

- The following characters can be used without problems:

```
a...z A...Z 0...9
. , : ; ? ! ' ' " ( ) [ ] + - * =
```

- With XeL<sup>A</sup>T<sub>E</sub>X, you can write **accents** and **umlauts** without further commands. Another option is to use commands for that:

```
"A \"O \"a \"o \"'a \"'o \ss{} \~u \~n
or \"{A} {\\"O} {\ss}
```

(1) Ä Ö ä ö á ò ß û ñ or Ã Ö ß

- The following characters have a **special meaning** in T<sub>E</sub>X. You must **escape** their function to use them.

# \$ & \_ { } % \ < > / ~ ^

- The following characters have a **special meaning** in T<sub>E</sub>X. You must **escape** their function to use them.

```
# $ & _ { } % \ < > / ~ ^
```

- escaping with **backslash**

```
\# \$ \% \_ \{ \} \%
```

(2) # \$ & \_ { } %

- The following characters have a **special meaning** in T<sub>E</sub>X. You must **escape** their function to use them.

```
# $ & _ { } % \ < > / ~ ^
```

- escaping with **backslash**

```
\# \$ \% \_ \{ \} \%
```

(2) # \$ & \_ { } %

- escaping with **macros** or **math mode**

```
\textbackslash \textasciitilde \textasciicircum  
\textgreater $>$ \textless $<$ \textbar $\textbar$ $|
```

(3) \ ~ ^ > > < < | | |

More on special characters:

[https://en.wikibooks.org/wiki/LaTeX/Special\\_Characters](https://en.wikibooks.org/wiki/LaTeX/Special_Characters)

# Space & line break

special treatment of **spaces** and **line breaks** to avoid typographic errors

- **no difference** between a **blank** and a **tab**
- **Consecutive blanks** are treated as only one blank.
- A **blank** at the **beginning of a line** is ignored.
- One **line break** (1x `<ENTER>`) is interpreted as a blank.
- One **empty line** (2x `<ENTER>`) is interpreted as the end of a paragraph.
- **More than one empty line** is interpreted as one empty line.

## Example

This is        a sample                text with too   many spaces. Here, I use one  
line break.

This is a sample text. Now, I use one blank line.

This is a sample text. Now, I use 3 blank lines.

This is a sample text.

## Example

This is        a sample                text with too   many spaces. Here, I use one line break.

This is a sample text. Now, I use one blank line.

This is a sample text. Now, I use 3 blank lines.

This is a sample text.

This is a sample text with too many spaces. Here, I use one line break. This is a sample text. Now, I use one blank line.

This is a sample text. Now, I use 3 blank lines.

This is a sample text.

- 7 Commenting out**
- 8 Text formatting
- 9 Text environments
- 10 Installing packages

# Commenting out

In L<sup>A</sup>T<sub>E</sub>X, text following the character **%** in a line will be **ignored**.

- **hiding code/text**, without deleting it;
- **finding errors** in sections;
- **avoiding blanks** and **empty lines** in a long input line;
- **writing comments** without seeing it in the output.

```
This is a sample text. %This are just notes
%Here is a special characters and a command: & \small
```

```
A comment can divide a word:
Rindfleischetikettierungs% 5 morphemes
überwachungsaufgaben% 6 morphemes
übertragungsgesetz.
```

This is a sample text.

A comment can divide a word: Rindfleischetikettierungsüberwachungsaufgaben-  
übertragungsgesetz.

normal  
large  
Large  
LARG  
huge  
Huge

The commands for font size can be used as **declarations** or as **environments**.

# Exercise

Download the PDF [myDocument-EX2.pdf](#) and replicate it with the commands you have already learnt.

- 1 What is L<sup>A</sup>T<sub>E</sub>X?
- 2 Document structure 1
- 3 Document class
- 4 Commands
- 5 Document structure 2
- 6 Characters & spaces
- 7 Commenting out
- 8 Text formatting
- 9 Text environments**
- 10 Installing packages

# Text environments

You will normally need the following environments:

- quotations,
- lists,
- abstracts,
- ...

# Quotations

- In L<sup>A</sup>T<sub>E</sub>X there are two environments for quotations `quote` and `quotation`.
- Both show a different output dependent on the document class (e.g. `beamer` vs. `article`).

```
This is a sentence before the \texttt{quote} environment.
```

```
\begin{quote}
```

```
Furthermore, each actual ‘‘language’’ will incorporate a periphery of borrowings,  
historical residues, inventions, and so on, which we can hardly expect to -- and  
indeed would not want to -- incorporate within a principled theory of UG. [\dots]
```

```
Viewed against the reality of what a particular person may have inside  
his head, core grammar is an idealization.
```

```
\hfill (Chomsky,~1981:~8)
```

```
\end{quote}
```

```
This is a sentence after the \texttt{quote} environment.
```

# List environments

L<sup>A</sup>T<sub>E</sub>X has 3 pre-defined and 1 general list environments:

- `itemize`,
- `enumerate`,
- `description`,
- `list`.

Every environment begins with the `\begin{ }` and ends with the `\end{ }` command.  
Each point in the list begins with `\item`.

```
\begin{itemize}
\item syntax
\item semantics

\begin{itemize}
\item lexical semantics
\item propositional semantics
\end{itemize}

\item morphology
\end{itemize}
```

- syntax
- semantics
  - lexical semantics
  - propositional semantics
- morphology

The description list can be used for terms with their definitions.

```
\begin{description}
\item[Morpheme:] smallest grammatical unit in a language bearing a meaning

\begin{description}
\item[Allomorph:] phonetic variant of a morpheme
\end{description}

\item[Phoneme:] systematic unit of sound (or gesture in the case of sign
languages, see chereme) that distinguish one word from another in a particular
language
\end{description}
```

**Morpheme:** smallest grammatical unit in a language bearing a meaning

**Allomorph:** phonetic variant of a morpheme

**Phoneme:** systematic unit of sound (or gesture in the case of sign languages, see chereme) that distinguish one word from another in a particular language

# Combining lists

Lists can be **combined** and **embedded** in other list types.

```
\begin{description}  
  \item[Morpheme:] smallest grammatical  
    unit in a language bearing a meaning  
  
  \begin{itemize}  
    \item minimal unit in morphology  
    \item subtypes:  
  
    \begin{enumerate}  
      \item roots  
      \item prefixes  
      \item suffixes  
      \item \dots  
    \end{enumerate}  
  \end{itemize}  
  
\end{description}
```

Morpheme: smallest grammatical  
unit in a language  
bearing a meaning

- minimal unit in morphology
- subtypes:
  - ① roots
  - ② prefixes
  - ③ suffixes
  - ④ ...

# Customizing lists

Bullet points can be customized with an **optional parameter**.

```
\begin{itemize}
\item standard symbol
\item[+] customized
\item[$+$] customized
\item[$\checkmark$] customized
\end{itemize}
```

- standard symbol
- + customized
- + customized
- ✓ customized

```
\begin{enumerate}
\item standard symbol
\item[-] customized
\item[$-$] customized
\item[--] customized
\item standard symbol
\end{enumerate}
```

- ① standard symbol
  - customized
  - customized
  - customized
- ② standard symbol

# Abstract

For automatic abstracts, use the option `abstracton` in the `\documentclass` command.

```
\begin{abstract}
```

An abstract is a brief summary of a research article, thesis, or any in-depth analysis of a particular subject and is often used to help the reader quickly ascertain the paper's purpose.\par

When used, an abstract always appears at the beginning of a manuscript, acting as the point-of-entry for any given academic paper.

```
\end{abstract}
```

## Abstract

An abstract is a brief summary of a research article, thesis, or any in-depth analysis of a particular subject and is often used to help the reader quickly ascertain the paper's purpose.

When used, an abstract always appears at the beginning of a manuscript, acting as the point-of-entry for any given academic paper.

# Exercise

Download the PDF [myDocument-EX3.pdf](#) and replicate it with the commands you have already learnt.

- 1 What is L<sup>A</sup>T<sub>E</sub>X?
- 2 Document structure 1
- 3 Document class
- 4 Commands
- 5 Document structure 2
- 6 Characters & spaces
- 7 Commenting out
- 8 Text formatting
- 9 Text environments
- 10 Installing packages**

# Installing Packages

- The functions L<sup>A</sup>T<sub>E</sub>X offers are restricted. Most **extra features** you will need are in **packages** that you can install in your T<sub>E</sub>X document.
- Packages must be installed in the **preamble** of your document.

```
\usepackage[parameter1, parameter2]{package name}
```

# Installing Packages

- The functions L<sup>A</sup>T<sub>E</sub>X offers are restricted. Most **extra features** you will need are in **packages** that you can install in your T<sub>E</sub>X document.
- Packages must be installed in the **preamble** of your document.

```
\usepackage[parameter1, parameter2]{package name}
```

- Normally, (many) L<sup>A</sup>T<sub>E</sub>X packages are **pre-installed** in your T<sub>E</sub>X distribution (e.g. MiKTeX).
- (Almost) every other package with manual can be **downloaded** from CTAN – The Comprehensive T<sub>E</sub>X Archive Network ([www.ctan.org](http://www.ctan.org))
- With the command `\usepackage` your T<sub>E</sub>X distribution usually **downloads automatically** the package – if necessary.

This packages can be useful:

- Language package: `babel` `\usepackage[ngerman, english]{babel}`
- Font: `libertine` `\usepackage{libertine}`
- Blind text: `blindtext` `\usepackage{blindtext}`

Sometimes the **order** in that packages have been installed can affect the compilation.

Also, not all packages are **compatible** with each other or with your compiler (XeT<sub>E</sub>X vs. PDFL<sup>A</sup>T<sub>E</sub>X).

# Exercise

Download the PDF [myDocument-EX4.pdf](#) and replicate it with the commands you have already learnt. Follow the instructions in the last section and install the packages.
